Comments:	<p>Removal of an orchard , bigger picture , the community , the residents , bigger still the environment , not only on a small niche scale.</p> <p>In towns where there are so few green areas left , can more suitable suits not be found , lots of sites with derelict and decaying buildings that need to be built on , as such sites are dangerous and unsightly.</p> <p>So the impacts , slow at first but as with all invasions of man , and it's greed , the impacts flourish for years to come. Natural destruction causes enough problems within the environment , look at floods etc etc , but left alone succession can and does rebuild habitats , it took 21years after Krakatoa erupted before we show basic flora , but bricks and tarmac does not allow for succession.</p> <p>Plants disappear , insects disappear , birds disappear , bats disappear , I would be very interested in a study carried out by English Nature , RSPB and other such bodies to gain a better understanding of what destruction would be caused to the ecosystem of the orchard , who knows it may prove to be the nesting site of a rare bird , a rare insect , who knows , we don't know until prolonged studies have been carried out , look at Arne in Dorset , a very rare lichen grows there so rare it only grows in three places in the world.</p> <p>If the proposal went ahead , how would the damage to birdlife etc be minimised , just look at the current situation with Network Rail etc etc</p> <p>So that's have more thought with regards to environmental impact studies</p> <p>The residents bought their houses , with the orchard in place etc etc , i'm no expert but I expect the house prices will be lowered as a result of this intended blot on the landscape , how would this be compensated for</p> <p>I do hope that all this and more has been taken on board , and not just the monies that can be made</p>
